Rorschacherstrasse 150
9006 St. Gallen, Switzerland

Manuscripts of original papers should be submitted online at <http://jsc.manuscriptcentral.com/> and following the on-screen instructions.

The authors transfer the **copyright** to their article to Springer-Verlag effective if and when the article is accepted for publication. The copyright covers the exclusive and unlimited rights to reproduce and distribute the article in any form of reproduction (printing, electronic media or any other form); it also covers translation rights for all languages and countries. For U.S. authors the copyright is transferred to the extent transferable.

Summary of manuscript processing

Initial Submittal

Authors are requested to submit manuscripts in English only to *Supportive Care in Cancer* online at <http://jsc.manuscriptcentral.com.>

Logging in:

In the Manuscript Central Author Center, "File Upload Center", you will upload all files associated with your manuscript submission. **All files will be automatically converted to .pdf format by the system.**

Upload your manuscript following the instructions given on the screen.

Note – you may already have an account for Supportive Care in Cancer. Please click the "check for existing account" button; if an account exists, you will then receive an automatic e-mail containing your user id and password. If no account exists, please click "create a new account" and follow the instructions given on the screen.

File format:

For **initial submittal and revisions**, submit only *one file* containing your entire manuscript *including figures and tables*

1. The file types allowed include **only** the following: .doc, .rtf
2. Do **not** use other file types, for example, **PDF**, Zip files, Excel spreadsheets, LaTeX files, QuickTime movies, PowerPoint presentations or other image types.
3. With your graphics programme, convert your figures to **.tif** or **.eps** format before using your word processor to include them in the manuscript you are submitting.

Please note: Submissions that do not conform to the above standards will be returned to the authors by the journal staff.

If online submittal is not possible, an author should submit a complete electronic file (using the above file formats) preferably by e-mail to the editor. Large files, however, may not be transmitted successfully as e-mail attachments. Paper copies can be submitted by mail in quadruplicate together with two sets of illustrations, electronic supplementary material and with a diskette, a Zip cartridge or a CD-Rom to the responsible Editor.

Final submittal of manuscripts

At the time that the Editor notifies an author of acceptance of a manuscript for publication, the author will receive instructions on submitting the final manuscript online in electronic form.

Preparation of final manuscript

After final acceptance of your manuscript for publication, submit a *separate file* for the text (with tables and figure legends included) and a **separate file for each figure**. The file name (one file for each figure) should include the figure number.

File format:

The text file types allowed include **only** the following:

– .doc or .rtf

The graphics file types allowed include **only** the following:

– .tif, .eps, .pdf

1. The **title page** should give:

– initial(s) or first name(s) and surname(s) of author(s)

– title of paper

– complete address of each author's institute

– any footnotes referring to the title

– address for correspondence

To facilitate communication between the authors, editors and publisher, the author(s) should also indicate a fax number and e-mail address on this page.

2. The **manuscript** should be completely ready for typesetting. The material must be arranged as follows: Abstract; Keywords (up to 5); Introduction; Patients and methods; Results; Discussion; Acknowledgement(s); References; tables; figure legends.

3. **Abstract.** Each full-length original contribution should be preceded by an abstract of up to 250 words (for review articles and short communications an unstructured abstract of 70–80 words is sufficient). **The abstract must be structured as follows:** (1) goals of work; (2) patients and methods; (3) main results; (4) conclusions. Immediately after the Abstract, up to 5 Keywords should be supplied that reflect the scope of the paper.

4. **Footnotes**, other than those referring to the title, should be numbered consecutively. **Footnotes Symbols** should be used consistently in figures, tables and text (lowercase or capital letters, arabic or roman numerals).

5. **References.** The author is responsible for the accuracy of the references. Citations in the text should be identified by numbers in brackets referring to a numbered, alphabetical list of references at the end of the paper. The list should be alphabetical according to the first author's name. Works by two authors are alphabetized according to the second author and those by more than two authors are in chronological order. Only works referred to in the text and already accepted for publication can be included. Journal titles should be abbreviated according to *Index Medicus*. References such as "personal communication" or "unpublished data" should not appear in the reference list, but can be cited in the text in parentheses, with the author's initial(s) and last name. This also applies to papers presented at meetings but not yet published or accepted for publication. If possible, a date should be cited for both "personal communications" and "unpublished data."

Examples:

1. Graf-Rüegg M (1989) Krebs – dennoch Hoffnung auf Leben / Cancer – a second flowering. Springer, Berlin Heidelberg New York

2. Jungi WF (1991) Diet to prevent gastrointestinal cancer? Recent Results Cancer Res 108: 287–292

3. Suttorp M, Barzantny U, Rister M (1990) Chemiluminescence of polymorphonuclear leucocytes in response to interferons. In: Freund M, Link H, Welte K (eds) Cytokines in hemopoiesis, oncology, and AIDS. Springer, Berlin Heidelberg New York, pp 73–80

6. **Tables** should have a title and a footnote explaining any abbreviation used in that table.

7. **Illustrations** should be prepared in electronic form whenever possible; non-digital originals should be scanned and vector graphics used. All figures (photographs, graphs or diagrams) should be cited in the text and figure parts should be identified by lower-case Roman letters.

Electronic Formats

Scan resolution: Scanned line drawings should be digitized with a minimum resolution of 800 dpi relative to the final figure size. For digital halftones, 300 dpi is usually sufficient.

Color illustrations: the authors will be expected to make a contribution (EUR 485, US\$ 435 plus 16% VAT) towards the extra costs, irrespective of the number of color figures. Store color illustrations as RGB (8 bits per channel) in TIFF format.

Vector graphics: Fonts used in the vector graphics must be included. Do not draw with hairlines. The minimum line width is 0.2 mm (i.e., 0.567 pt) relative to the final size. Vector graphics exported from a drawing program should be stored in EPS format; the EPS file must always contain a preview in TIFF of the figure. Suitable drawing programs include Freehand, Illustrator, Corel Draw, and Designer.

Raster graphics: Suitable image-processing programs include Photoshop, Picture Publisher, Photo Paint, and Paint Shop Pro. Most presentation programs, such as Excel, Power Point, and Freelance, produce data that cannot be processed for publication, because they do not support the export of EPS data. Use patterns instead of colors to fill graphics, because monotone reproduction merges colors into grey tones.

Publication of detailed descriptions or photographs of patients (e.g. in case reports) may lead to disclosure of their identity. Details that might identify patients should be omitted unless absolutely necessary for scientific reasons. Falsification or altering of data should never be used as a means of ensuring anonymity; masking of the eye region in photographs of patients may be inadequate. If identification of patients is unavoidable, the author must guarantee that the reproduction of illustrations in which a patient is recognizable is approved either by the patient him-/herself or by his/her legal representative.

8. **Legends** must be short and appended to the text. Each should provide a brief description of the corresponding illustration, so that it can be understood without reference to the text.

9. One complimentary copy is supplied. Orders for offprints should be placed by returning the order form with the corrected proofs. When you order offprints, you are entitled to receive in addition a pdf-file of your article for your own personal use.
