

The fact that increasingly more people are getting older and older and decisively form our view of society is, in part, due to the intensive research of the aged and intensive medicine for the elderly in both the past and the present.

The ZGG (Journal of Gerontology and Geriatrics) has already taken that into account for many years, by informing, via its broad spectrum, its interested readers about all developments in research in old age.

Topic-specific issues present in detail all problems of gerontology, biology and basic research of aging, geriatric research, psychology and sociology as well as practical nursing for the elderly.

**General Information** Manuscripts in German or English can only be submitted to the editors (You may find the addresses in every issue or at [www.zgg.springer.de](http://www.zgg.springer.de)). All manuscripts will be peer reviewed. Manuscripts that are not along the lines below will be rejected and returned to the author for correction of the formal mistakes. Submission requires 3 copies. Receipt of the manuscript will be acknowledged in writing within 14 days. If this should not be the case, authors are requested to check with the editors.

The manuscript must be double spaced, with a wide margin, typed only on one side of the sheet. All manuscript pages, including references and legends must be numbered sequentially.

Title abbreviation of the journal for references: Z Gerontol Geriatr

**Page Limits** Original articles as well as topical contributions should not exceed 10 to 12 manuscript pages of approximately 1.800 characters each (incl. tables, figures and references). At the end of the article should figure 5 essential statements, which are not meant to replace the abstract.

**Short Contributions** With appropriate topics it is possible to submit short contributions with a maximum of 2,5 manuscript pages (1.800 characters each, including figures, tables and references). In order to have citable contributions, such manuscripts, too, need to be submitted with a German and English Abstract and a maximum of 5 key words respectively.

**Structure** The first page of the manuscript should include: 1. Title of the article, 2. Name of all authors, 3. Footnotes to the title, 4. Complete addresses of all authors with identification (✉) of the corresponding author, 5. Column title (running title of the article for the page heading).

The *tables* are to be numbered independent of the figures with *Arabic* numerals, to be provided with headings, and to be kept separate from the text.

*Figures* must also be numbered with *Arabic* numerals and kept separate from the text. The legends must appear on a separate sheet. The desired placement of figures and tables is to be marked in the margin of the manuscript.

**Electronic Files** We request a diskette/CD-ROM for each manuscript. It should only be submitted after the reviewing process has been completed. Please observe the guidelines of the Technical Instructions (printed in most issues of this journal) when preparing your manuscript file.

**Summaries/Zusammenfassungen and Key words/Schlüsselwörter** A Summary of the essential statements both in English and German must precede each article, as well as an English Title. The Summary should be a short abstract as appropriate for the needs of international documentation systems. At the same time the summary should be sufficiently comprehensive and detailed to inform the international reader. Inadequate summaries delay editorial processing of manuscripts. Below the summary the author must state up to 5 key words for documentation and indexing purposes in German and also in English.

**References** Only articles cited in the text are to be listed. They should be arranged alphabetically by the first author's name and numbered sequentially. *Only the reference number should appear in the text* (in square brackets).

Please do not list more than 30 literature references. Examples:

*Articles in journals:*

Kao AC, Nanda A, Williams CS, Tinetti ME (2001) Validation of dizziness as a possible geriatric syndrome. *J Am Geriatr Soc* 49: 72–75

*Books:*

Dangel B, Kolleck B, Korporal J (2002) Rehabilitation Pflegebedürftiger – Konzept, Umsetzung, Ergebnisse. E.B.-Verlag, Hamburg

*Articles in books:*

Schaie KW, Willis SL (1999) Theories of everyday competence and aging. In: Bengtson VL, Schaie KW (Eds) Handbook of theories of aging. Springer, New York, pp 174–195

**Figures** If the author wants to re-use previously published material he is responsible to provide a permission by the copyright-holder.

Double presentation of the same information in tables and figures should be avoided. Short, clear legends make additional description in the text unnecessary.

The author is responsible for obtaining either from the patient or his legal representative permission for the reproduction of figures in which a patient can be recognized.

All material for figures must be identified on the back with the author's name and "top" or "bottom" (soft pencil – no stamp, no ink).

For general advice on the provision of figures please refer to the Technical Instructions in this issue.

Color illustrations will be accepted up to the discretion of the editors/the publisher.

**Conflict of interest** A potential conflict of interest exists when the activities of a participant of the review or publication process (author, editor, reviewer) could possibly influence the review in an inappropriate manner. This is so, even if no such manipulation actually takes place.

Authors need to indicate at the moment of manuscript submission all relations with a company whose product plays an important role in the article or with a company that sells a competing product. Even if there is no potential conflict of interests, this must be stated explicitly. The presentation of the topic needs to be independent and its concrete realization needs to be neutral as regards other products. The request for stating any conflict of interests does not represent an allegation against the authors, but is rather good practice in publishing and serves scientific transparency.

**Offprints** Offprints may be ordered at cost price when the page proofs are returned. Steinkopff will supply the corresponding author with one complementary copy of the relevant issue.
